

Review Comments Case 08-12
MCDOT 7/2/2008

Page #	COMMENT
Comments for Section 331	
General	Adjust formatting to be consistent with MAG.
2	Section 4.2: Testing methods or procedures should be specified.
3	Section 5: Testing methods or procedures should be specified. Tests to determine polymer content and type are not common. Should we use certificates instead of verification testing? See Section 714.3.
3	Section 5: It should be specified that these tests are quality assurance tests. We also need to know what the agencies need to do if the test results are out of spec.
3	Section 5: Our experience is that the emulsion is easily out of spec; do we need to perform verification tests on the emulsion? What will be the frequencies for the tests?
Comments for Section 714	
2	The polymerized Cationic Emulsion for Microsurface seal should be classified as something other than "CSS-1H" for this designation has been defined as "Cationic Slow Setting" in MAG 713.
